Objective:

As a B.Tech Computer Science student with practical experience developing web applications and machine learning models, I am eager to contribute to innovative, user-focused projects and further enhance my skills in JavaScript, React.js, and data-driven solutions.

Education:

Bachelor of Technology (B-Tech) in Computer Science and Engineering:

- KKR and KSR Institute of Technology and Sciences, Vinjanampadu, Andhra Pradesh.
- Expected Graduation: July 2027

Relevant Courses:

- Mathematics for Engineers
- Computer Programming and Problem Solving
- Data Structures and Algorithms
- Digital Logic Design
- Discrete Mathematics

Intermediate (12th Grade):

- Sri Sarada JR College, Moghalarajapuram, Vijayawada, Andhra Pradesh.
- **Year of Completion**: 2023
- **Percentage**: 91.3%

Secondary Education (10th Grade):

- Tiny Tots EM High School, Sullurupeta, Andhra Pradesh.
- **Year of Completion**: 2021
- **CGPA:** 10.0

Technical Skills:

- **Programming Languages:** Python, JavaScript (ES6+), Java, C
- **Web Development:** HTML5, CSS3, JavaScript, React.js, Supabase
- **Frontend Concepts:** DOM Manipulation, Fetch API
- **Machine Learning:** Supervised/Unsupervised Learning, scikit-learn, pandas, numpy, model evaluation, LLM
- **Tools:** Git, GitHub, Netlify, Render, Jupyter Notebook, ollama

Soft Skills:

- Strong analytical and problem-solving abilities
- Adaptability and willingness to learn
- Time management and organizational skills
- Effective Communication
- Positive attitude and sense of humor: Able to create a positive atmosphere and foster strong relationships through humor and empathy in tense situations

Internships:

- Open to internships in Web Development, Frontend Engineering, or Machine Learning

Projects:

1. Home Security System (Electronic Eye)

- **Description:** A light-sensitive alarm system designed to detect unauthorized entry by triggering a sound when an object or person interrupts the light beam.
- **Highlight:** Built this during 9th grade with guidance from physics lecturer Elisha Sir; qualified for the **State-Level Science Expo** organized by the Government of Andhra Pradesh.

2. EduVault

- **Description:** A simple and user-friendly web application that lets students create an account, log in, and upload or download their academic files from anywhere. It makes file sharing easy and accessible, allowing students to keep their important documents in one place and access them anytime using their login credentials.
- **Website Link:** https://incomparable-moonbeam-bf8044.netlify.app
- **GitHub Repository:** https://github.com/Jathin-24/EduVault

3. Insurance Purchase Prediction System

- **Description:** Developed a machine learning model to predict whether a customer is likely to purchase insurance based on features such as age and salary. The project was implemented and evaluated in a Jupyter Notebook environment.
- **Technologies Used:** Python (pandas, numpy), Jupyter Notebook
- **GitHub Repository:** https://github.com/Jathin-24/Project_1

4. Idea to Start-up Platform

- **Description:** Developed a web platform that connects investors with individuals who have innovative ideas, providing a space to showcase projects, browse funding opportunities, and facilitate communication between stakeholders.
- **Technologies Used:** HTML, CSS, JavaScript
- **Key Features:**
  - User registration and project submission forms.
  - Browse and search for ideas
  - Responsive UI for desktop and mobile
- **Status:** Frontend implementation completed; backend integration in progress
- **GitHub Repository:** https://github.com/Jathin-24/Team_Thunders_Soc

5. Breast Cancer Classification Using CNN (Cancer Net)

- **Description:** This project implements a deep learning classifier, CancerNet, to automatically detect malignant and benign breast cancer histology images using the IDC dataset.
  It demonstrates how Convolutional Neural Networks (CNNs) can assist pathologists in early diagnosis and improve treatment workflows.
- **Technologies Used:** Python, CNN, pandas, numpy
- **GitHub Repository:** https://github.com/Jathin-24/Project_2

6. Mood_Enhancer

- **Description:** This project mainly focuses on changing the mood of the user based on his current mood and in our project we will make changes in the users environment which helps in improving the mood of the user
- **Technologies Used:** Hugging face Pre Trained models, openCV, Python, Supabase
- **GitHub Repository:** https://github.com/Jathin-24/IOT_Hackathon_Mood_Enhancer

7. Employee_Attrition_Prediction

- **Description:** Built an end-to-end machine learning pipeline that predicts employee attrition using HR, demographic, and job-related data. The goal is to help organizations identify employees at risk of leaving and take preventive actions.
- **GitHub Repository:** https://github.com/Jathin-24/Employee_Attrition_Prediction

8. Customer-Churn-Prediction

- **Description:** Built an end-to-end machine learning pipeline that predicts customer churn using behavioural and transactional data. The goal is to help businesses to identify customers who are likely to discontinue their service.
- **GitHub Repository:** https://github.com/Jathin-24/customer-churn-prediction-system

9. Accident Severity Prediction

- **Description:** Built an RandomForest ML model to predict based on the data gathered and it is used to predict the Severity of Accident happening based on the data
- **Colab Link:** **https://colab.research.google.com/drive/11S91VSZqDjzFXPdtK7tSdEwb46ygqNJT?usp=sharing**

Achievements:

- Qualified for **State-Level Science Expo** organized by the Government of Andhra Pradesh for the "Home Security System" project (9th Grade)
- **1st Prize Winner** at college-level **Hackathon** for the project **EduVault**, developed using **Bolt.ai** (2025) as part of Team.

Hobbies:

- Singing
- Playing Musical Instruments
- Reading Books
- Watching Anime
